RQ1 linguistic predictors, MedMentions (biomedical literature)
Part 1: $P(\hat{H} > 0)$, binomial (logit)
Lexical change magnitude
Accepted variants
Synonym substitution share
Mention length
Controlled paraphrase share
Back-translation share
−0.4
−0.3
−0.2
−0.1
0.0
0.1
0.2
Coefficient (95% CI)
Part 2: magnitude among $\hat{H} > 0$, least squares on logit($\hat{H}$)
Lexical change magnitude
Mention length
Back-translation share
Accepted variants
Synonym substitution share
Controlled paraphrase share
−0.8
−0.6
−0.4
−0.2
0.0
Coefficient (95% CI)
Family shares read against syntactic reordering,
the dropped simplex reference.
Model contrasts are not drawn on this plate.
